# PHYSICAL DEVICE SECURITY CONVERGENCE OF CYBERSECURITY WITH PHYSICAL SECURITY

## Network monitoring and Cybersecurity for any connected device

scoring and alerts assessment

360° Full visibility for real time continuous tracking

Assets management

Root-Cause analysis

Convergence of Cybersecurity with Physical security

Out-of-Band design

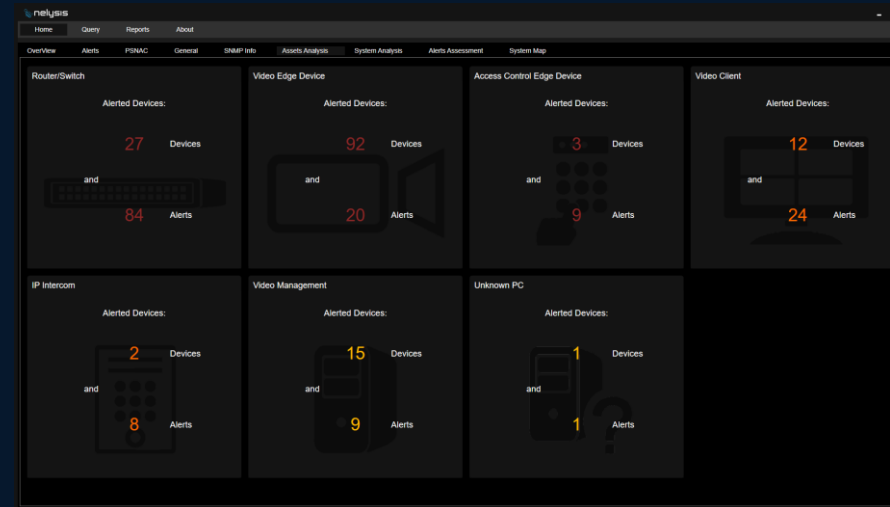

Network health monitoring

Agentless

Vendor Independent

### Working in the shadows

**OUT OF BAND-** Separation between the Nelysis platform and the monitored network

## Gaining 360° visibility out of chaos

Vanguard MSM Provides a unified user interface enabling the control and the monitoring of the various element in all monitored networks.

Vanguard NGS Together with the Vanguard Core Server creates an Out-of-Band tunnel to the monitored network.

**Monitoring** The Vanguard system supports different types of events monitoring like DPI, Syslog, SNMP, WMI & Windows event logs, etc. enabling data consolidation and the Convergence of Cybersecurity with Physical Security.

Vanguard Collector Series The Vanguard Network Traffic Collector (NTC) is a network analyzer that collects, consolidates and send traffic information to the Vanguard Network Central Management software (NCM).
